

October 11, 2011

To our Shareholders:

As most of you know, the solar and sapphire industries have been in a state of flux in recent weeks, as some of the larger manufacturers have adjusted their outlook. The assumption was that this has negatively impacted TechPrecision's business, and I have received several questions to that effect from concerned shareholders.

As I explained to those shareholders, it is my belief that TechPrecision's opportunities, both medium and long-term, have never been better, especially for our China operations for the solar and sapphire markets.

I remain optimistic that the efforts we undertook in the last eight months will position TechPrecision to capture a larger share of the market, and that, even as the markets contract, we will experience an increase in alternative energy volumes. This is due in part to the speed with which we brought our Wuxi Critical Mechanical Components Co., Ltd., or WCMC, subsidiary online. Our customers have stated that they intend to move manufacturing closer to their end customers, and that their subcontractors will need to provide services in Asia as well. As prices paid for end products in the solar and sapphire markets continue to drop worldwide, producers must identify and source lower cost production alternatives, and WCMC is uniquely positioned to serve this need as one of the few entities that can provide both superior quality and competitive pricing. More than 90% of poly silicon solar panels and many new nuclear reactors are scheduled to be built in China. This presents a significant opportunity for us, and production at the WCMC facility is progressing according to plan as we finalize our production supply chain in China.

Currently, we are producing multi-crystalline, mono-crystalline and sapphire chambers at our WCMC facility. New and current customers have provided us forecasts for both solar and sapphire production in the coming quarters. We have already added four customers at WCMC, and multiple other customers have indicated an interest in expanding business with TechPrecision and our WCMC division in Asia for the nuclear and medical markets.

The transition of solar manufacturing from TechPrecision's Ranor facility in Massachusetts to WCMC in China has given us the chance to add non-solar business to our domestic operations. We are working very hard to backfill the business at Ranor, initially with defense-related and commercial industrial work, and longer-term with large-scale nuclear-related projects. Essentially, 60% of Ranor's revenues have shifted to China, and a key goal for management is to replace this revenue as quickly as possible with predictable and profitable business. This will take some time, but we are excited about the possible opportunities.

The recent tragedies in Japan have bolstered demand for advanced-passive reactors. Over the next 10 years, 16 plants are scheduled to be built in China, six in the United States and five in Europe (including three in the United Kingdom). Because Ranor is one of the few facilities left in the United States that can produce the required components for these plants, this pipeline of new nuclear projects creates a significant opportunity for us. This established pipeline of new nuclear projects creates a significant opportunity for us, including \$6-10 million in potential revenue to TechPrecision for each reactor prime component.

TechPrecision should not be viewed as a company reliant on one large customer as we have taken significant steps to diversify our business in three important ways:

- We have diversified our exposure to the solar industry, adding new customers and broadening our participation into areas like mono-crystalline, HEM sapphire and MOCVD (metal oxide chemical vapor deposition);
- We have diversified our solar operations geographically, shifting production to China to strategically position us closer to our customers and their end-users; and
- We have diversified our overall operations beyond solar, increasing our participation in less-cyclical industries like defense, aerospace, industrial gas and nuclear primary components.

We believe TechPrecision has positioned itself to grow by solidifying our reputation for quality in a variety of expanding industries and verticals. I remain optimistic about our intermediate and long-term business opportunities, and the improving diversification of our business.

I look forward to elaborating on these opportunities during our next quarterly conference call.

Sincerely,

James Molinaro, CEO
